**Big lines need more flow.** When you find yourself working in bigger lines the low flow / high pressure machines just don't make the cut. The Model 402 takes you to the next step. A forty gallon per minute flow will move the big debris that builds up in larger lines.

**Strong Hose Reel** - Built with 1/4" thick steel to withstand maximum working pressures. Featured is an industrial rotation bearing for smooth rotation. Locking points every 7.5 degrees. Includes capacity for 400 feet of 3/4" hose.

**Power Plant** - Our quality starts with the high quality diesel engine and an industry leading 40 GPM @ 2000 PSI Pump.

**600 gallon 402XL** - 600 gallons will give you the maximum run time you need for those big jobs without losing the low profile design.

**Pre-Painted Sub-Assemblies** - 6000# rated axles, tubular steel frame, and pre-painted sub-assemblies make the model 402 not only durable but will keep it looking great for years to come.

**State of the Art Controls** - Contained in a weatherproof NEMA 4 control box. Optional Smart Counter™ footage counter available with +/-1% accuracy. Wireless remote control is available for one man operation.

**Standard Accessories** - Every Model 402 Trailer Jet comes standard with hose, nozzles, tool box, a complete accessory package and the industry's best warranty.

---
