Mini Taurus TR2120

The Mini Taurus TR2120, tracked crawler is designed for inspecting pipelines from 6" - 30" in diameter, and is able to inspect 6" clay, concrete PVC pipe with major offsets, meandering conditions, and protruding laterals. Dual track drive provides 50% more wall contact area than wheeled crawlers. This greater contact area assures maximum traction under most inspection conditions.

Weighted pipe extenders assure maximum traction and debris clearance in lines from 8" to 24" diameter. A manual camera lift is available to optically center the camera in 30" to 36" lines. The stand-alone length of the transporter is 19.5". The combined length of the transporter and pan & tilt camera assembly does not exceed 26" with the camera in the home position. This allows the inspection and traversing of 6" diameter offset, meandering, or relined pipes. It also facilitates entry into short inverts.

Taurus TR2000

ARIES TR2000 is a fast, strong, sturdy, responsive platform that meets the expectations of the highest critics. Municipalities and contractors rely daily on ARIES Taurus TR2000 crawlers to operate successfully through hard to inspect pipelines. The unmatched reliability of the Taurus TR2000 enhances your productivity and reduces your downtime.

The tractor is designed in an all stainless steel construction that will not rust or degrade and the waterproof motor and transmission with hermetically sealed electrical connection provide for a completely maintenance free drive system. The self-cleaning, agricultural type sprockets prevent chain binding. Coated carbon steel chains add strength and minimize chain stretch. The Taurus TR2000 operates from any multi-conductor truck mounted or portable TV system.
